ID24

Enhance the accuracy and security for applications and services with minimal effort. There is no need to handle user data storage or verify user identities individually. With ID24 integration, user data centers can be consolidated, identity verification can be streamlined, user management can be facilitated, detailed permissions can be granted, and more.

Features are as followings :

01 SINGLE-SIGN ON

Enable users to authenticate with ID24 for a unified login experience across applications. This means that your applications no longer need to manage login forms, user permission checks, or user data storage individually. Once users sign in with ID24, they won't need to sign in again to access other applications.

02 IDENTITY BROKERING AND SOCIAL LOGIN

Simplify social login integration by leveraging identity brokering through the admin console. It's simply a matter of selecting the social networks you want to add, without the need for code or modifications within your applications.

03 USER FEDERATION

Support seamless integration with existing LDAP or Active Directory servers.

Features are as followings :

04 ADMIN CONSOLE

The system administrator can manage all aspects of the server from a centralized console. They can create and manage applications and services, define granular permission policies, and handle user management, including privileges and sessions.

05 ACCOUNT MANAGEMENT CONSOLE

Users can manage their own accounts through the account management console. And also, can update their profiles and change passwords.

06 STANDARD PROTOCOLS

Our system utilizes standard protocols and supports OpenID Connect, OAuth 2.0, and SAML.

THE BENEFITS OF ID24 INCLUDE :

Security

Ensuring a high level of security.

Convenience and User Management Flexibility

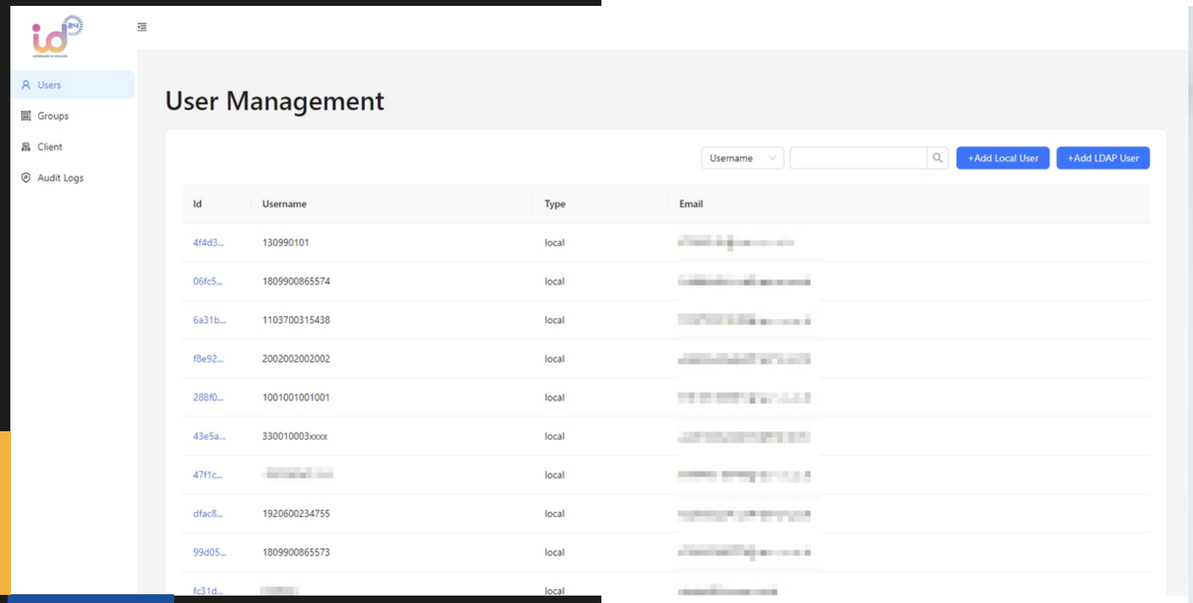
Providing ease of use and flexibility in user management.

Development Burden Reduction

Reducing the development workload.

Scalability for Growth

Accommodating scalability as your business grows.



ID24 is a service that simplifies and secures the management of identity verification and login processes within your applications, allowing you to focus on your core business.
